

WATER DETECTION SYSTEM

RESIDENTIAL - INDUSTRIAL - COMMERCIAL

INTRODUCTION

GIVE Systems Inc. created AQUA-STOP® in 1986. With 17 years experience, it's no surprise that we continue to innovate in the plumbing -alarm industry, using today's technologies to design our new control panel which combines the detection of water with the interruption of its flow.

Our commitment is giving the customer the highest quality water detection products. Consequently, our new state-of-the-art control panels CP-224 serie provides the best protection against water flood for industries, apartments buildings, museums and high rise condominiums.

Take a few moments to figure out why the combination of our CP-224 with the automatic valves AQUA-STOP® model 341-SV will represent the best solution for your installations.

AQUA-STOP®
models 3239, 341

In addition, the huge growth of communication via internet will allow you to supervise and control your water detection installations even from outside the country.

As a matter of fact, no matter the distance, you are now able to supervise and shut off , if necessary, the water supply of a condominium or any other facility simply by the action of a click on your computer.

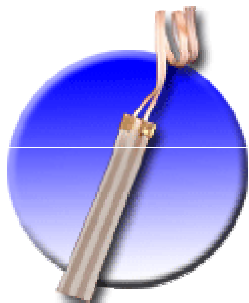

Naturally, the basic model , AQUA-STOP® 3239, stays the reference for single family dwellings. With the flexible detectors included, most houses are allowed to get the protection for all the appliances being the cause of a flood: Washing machine, hot water tank, dishwasher toilet, sink etc.

Control panel CP-224

We constantly strive to satisfy our customers by offering not only the ultimate protection but by also by giving the best quality service before and after the sale.

Definitely, AQUA-STOP® system represents the brightest solution for your water detection problems.
